Principality of Sealand

The Vision and the Road

 [Download](#) 

THE VISION

She arises from the depth of the sea: the IDEA of SEALAND, as old as humanity, yet still unborn ...

Amidst the global fight for the freedom of humanity, the salvation of the Earth, that has been fought for millennia, the IDEA of SEALAND emerges free and confident, cosmopolitan and interventional, and starts outside of all party strife to open new social and technical perspectives of humanity's evolution ...

SEALAND could be the flapping of a butterfly hardly noticable here, which however - according to chaos theory - faraway, clandestinely mediated by the formidable chain of cause and effect, may start a hurricane, an earthquake, even the fall of the old and the rise of a new continent. This quiet flap that is the IDEA of SEALAND may contribute finally to end the insane world war of the ignorant against Nature.

SEALAND holistic approach may be expressed with the ideals of JOHANN GOTTFRIED

HERDER in 1797 said:

"Wie cannot be happy or fully worthy and morally good as long as one human being is unhappy due to another ...

The tendency of human nature comprises a universe that is marked 'No one to himself, each for all, thus you will be mutually worthy and happy.'

An endless difference, striving for unity, that lies in all, that advances everyone."

[back to the top ▲](#)

THE ROAD

An artificial platform in the sea became in the year of the revolution 1968 through the courageous actions of stout-hearted men a free and sovereign state ...

The PRINCIPALITY OF SEALAND is a sovereign state in accordance with international law. Against all opposition SEALAND has remained until today and gained international legal acceptance. SEALAND maintains absolute neutrality and international independence. SEALAND does not seek political power. Our future does not come from politics. It will arise from the true art of governance based on true knowledge. To this knowledge SEALAND offers a safe haven, until it will be called upon from the whole world to shape our future in freedom and harmony with the true laws of existence. More than one hundred scientists of international renown already work under the asupices of SEALAND - still unseen today. THE PRINCIPALITY OF SEALAND supports and fosters economic cooperation in world trade. In the economy all is based on mutual acknowledgement and on trust (credit means trust). In our time trust is failing because it is extensively and systematically abused to enforce a misunderstood self-interest to the detriment of others. Therefore, free and unprejudiced congress of human beings is all the more important. For it is the nature of man as well as an economic necessity to show trust to one's fellow humans.

That is why the government of THE PRINCIPALITY OF SEALAND has founded the international SEALAND BUSINESS CLUB gegründet.

The  **SEALAND BUSINESS CLUB** is a further road to fulfil the VISION of SEALAND step by step.

The Principality of Sealand 1992

The Principality of Sealand is a sovereign state in the sense of international law. It fulfils all conditions required of a sovereign state by legislation. This is confirmed by various legal reports, among others by Prof. Dr. Walter Leisner, University of Erlangen and by Dr. Béla Vitányi, Professor in Public International Law, University of Nijmegen. In addition, the Principality of Sealand fulfils all requirements of a modern, democratic legal state. The Principality of Sealand has a democratic constitution and separation of powers into the legislative and the executive.

The official languages are German and English.

Location of the Principality of Sealand

The Principality of Sealand is located in the North Sea, latitude 51°53'40" north and longitude 1°28'57" east. The Principality of Sealand can be reached by air via London and Southend on Sea (GB), from where there is a helicopter connection to the Principality of Sealand. Entry and stay is possible only with the permission of the government of the Principality of Sealand.

History

During World War II the United Kingdom established several base platforms in the North Sea to fight the German Airforce and its V missiles. After the end of the war, the British army retreated from these flak and radar stations and blew them all up, curiously leaving "Roughs Tower", which was outside the three-mile zone valid at that time and thus in international waters. In 1967 the United Kingdom's Admiralty left "Roughs Tower". When the British struck the flag, a historically unique situation ensued, the creation of an unoccupied territory. Soon after, Roy Bates took possession of this island and proclaimed an independent state: the Principality of Sealand. Just two years later, this legal action would not have been possible due to significant changes in the maritime law, and so, this event remains unique in history. The Principality of Sealand does not belong to the United Kingdom, a fact which was confirmed on 25th October 1968 at Shire Hall, Chelmsfort, Essex, by an English Court of Justice, and confirmed also in diplomatic correspondence by the Ministry of Finances of the Federal Republic of Germany of 14th June 1977 IV C5-S 1300-118/77, and the Ministry of Finances of Belgium of 25th May 1980, 1/3 R9 DIV/313.941..

[back to the top ▲](#)

Relations to Other Nations

The Principality of Sealand is absolutely neutral in its relations to other nations. The Principality of Sealand is heeding its independence and its right of self-determination within the scope of the international law.

The main interest of the Principality of Sealand is centred on economic fields. This means economic relations with partner countries, with companies in world trade operating according to specific national laws. At present, the Principality of Sealand does not wish to be integrated into ideological blocks or systems by international or general agreements. Politically, the Principality of Sealand can not and does not want to become a world power. However, the advantages of a micro-state – like an administrative apparatus limited to a minimum, reliable and competent negotiating partners – make for a high degree of flexibility. This flexibility is more and more recognised and made use of by other states and governments as partner in the completion of international deals or as mediator in diplomatic missions.

To define the status of the Principality of Sealand quite clearly:

The Principality of Sealand is a state with the qualities of a business group, which means the Principality of Sealand knows neither civil servants nor functionaries, it exclusively knows active collaborators!

The Principality of Sealand is represented only by those who contribute to the achievement of its targets and thus to the development of the Principality of Sealand.

[back to the top ▲](#)

The Principality of Sealand and Western Europe

Since the end of World War II, the classic nations of Europe have been moving closer to co-ordinate their interests. This closing of ranks in precisely defined fields like economy,

finance, agriculture, defence etc. is to secure competitive advantages and to compensate problems in the economies of the individual nations which they cannot overcome by themselves. Increasing difficulties are caused by the attempt to harmonise and integrate the quite different and complex infrastructures of these countries, since there are quite a number of contrary interests at play in the EU. In this respect, the political powers in Europe currently are not succeeding in changing the existing infrastructures by direct measures. Political influence is exerted mainly by subsidies. In political economics, however, Subsidies can at best only effect repairs - "holes are filled" - there is not enough leeway for fundamental changes. The highly developed European countries with their high standards of living and high expectations of their citizens are more seriously concerned than all other states. They have to act quickly if they want to continue to take part in "world events and world business". And it is here that the Principality of Sealand finds its unique historical chance to act - through its strategy geared to economics and according to its tenets - as a catalyst and to fill recognised vacancies.

The Principality of Sealand and Eastern Europe

The situation will continue to worsen due to the breakdown of communism throughout the Eastern Bloc. It will take years or even decades until its peoples or individuals will live in better circumstances.

To accelerate the changeover from the planned economy to a market economy, the Principality of Sealand is setting the following priorities:

Agriculture

An expansion of agriculture by small and middle-sized farms is necessary in order to re-form the neglected rural areas into more attractive structures and at the same time to relieve the overcrowded regions. As a result, millions of jobs and the food supply will automatically be secured and improved both in the short and long term.

Industry

The leading position in military and space technology could - based on existing and future know-how with a simultaneous reduction of the armaments industry - quickly achieve the transition to a consumer economy. By using the enormous reserves of natural resources these countries could strive to realise sovereignty and competitiveness on the world market under their own steam.

Environment

In the light of what has been learnt from the catastrophic damages caused globally by the abuse of the environment, all possibilities must be taken into consideration in building up and converting both the agricultural and the industrial modernisation process. It is here that, as in western countries, an industry will develop that - again based on existing damages - will secure many new jobs and will contribute to an improved quality of life.

Only in a tolerable environment the goals that promote and guarantee the creativity and motivation of the individual can be reached.

Democracy/Objectives and Realisation

The government of the Principality of Sealand wishes to assist these young democracies with this very difficult process – during which setbacks always might occur – in building and realising these goals, like the necessary tolerance towards the freedom of religion, the acceptance of contrary opinions and the rights of minorities.

[back to the top ▲](#)

Policy for the Nineties

Initially, with all clarity and irrevocably, the government of the Principality of Sealand declares that it shall neither participate in businesses or activities nor cover any trade or acts associated with:

- a. weapons or parts of weapons, plans of armament systems or similar
- b. narcotics or other internationally indexed drugs or similar
- c. chemicals that are highly dangerous or could be used for weapon-like products
- d. pornography, articles endangering ethics and morals
- e. terrorism of all kinds, also of political provenance.

As already mentioned, the main focus of the Principality of Sealand's policy is on economics. Throughout the world, the Principality of Sealand has numerous representatives actively mediating trade in free-trade areas and representing the interests of the Principality of Sealand and its partners in the host countries. Trade is primarily operated through a database connected to the Principality of Sealand. The turnover achieved by the associated companies was about 2 billion US\$ in 1990 and about 2.2 billion US\$ in 1991. An extension of these representations is the priority for the coming years.

[back to the top ▲](#)

The Principality of Sealand

Its programme is to take advantage of its chances.

Regarding the principles outlined above, neither physical size nor the number of armies are decisive factors, important is solely the existence according to international law. The efforts by the Principality of Sealand must be based on self-confidence. Yet Sealand must recognise and respect its own limitations. The territory of the Principality of Sealand is small and it will remain small, irrespective of how many structures will be added out there in the North Sea. But the Principality of Sealand can achieve more than could be assumed from its mere size. It is the concern of its active citizens and friends to find and then consistently follow the right paths with the necessary instinct. The main theme of the policy is illustrated in this quote by the philosopher Epicurus who, in recognising what is humanly possible, rightly said:

"It makes no sense to demand from the Gods what one can achieve oneself."

A Concept for Natural Technology as an Element in SEALAND's Pyramid Model

GEA for Gaia

GEA is the acronym for Gravity-field Energy Accumulator.

Gaia is the name the Greeks gave to Earth and to the tutelary goddess for life on our planet.

In these days it becomes ever more evident what damage man has done to Gaia. He is waging war on nature and thus on himself. The alternatives are continued

self-destruction or an ecological turnaround.

One of the many possibilities for saving Gaia is the directed supply of energy to the elements of those of nature's systems that suffer from energy depletion.

A SEALAND scientist and researcher has developed a generator with which symmetrical gravitation waves of any frequency can be produced. It is possible with this generator to transmit energy into atomic and molecular structures of suitable substances, ground quartz for instance, and store it there. In this way the matter used for energy storage becomes an energy accumulator which gradually disseminates the energy with the needed specific frequency to nature's systems. Thus the natural systems regain lost energy in specific form and the self-healing powers are activated.

The GEA described here are no panacea, they act like a mild homeopathic remedy acts on a biological system.

Unfortunately, at this time "Mother Earth" must use her energy to limit the damage perpetrated by man in his ignorance and arrogance.

The best technologies can only be stopgaps, to fill the holes that man with his devastating policies (like nuclear testing) and his boundless greed (like the destruction of the rain forests) again and again opens up. What good the biggest technological achievements, if man destroys his own basis for living, namely Nature?

Only a complete reversal of man's attitude towards Nature will enable him to help Nature (for instance with the GEA) to heal herself.

SEALAND Ethics [back to the top ▲](#)

The microstate SEALAND strives to become a crystallisation nucleus for the development of a society in harmony with Nature.

SEALAND undertakes the historic experiment to stop war on Nature in this world by a "Coalition of the Sensible".

SEALAND wants to uncover the social reasons for this war on Nature and to help to overcome it without violence; to reduce the gradient between rich and poor in such a way that the energies thus freed can be utilised sensibly for the good of all people and will not turn themselves into a destructive breach in the dam.

SEALAND wants to use and augment its potential in order to find solutions to such problems as the impoverishment of the masses together with mass unemployment and the destruction of Nature caused by dire need or by greed.

SEALAND is a democratic state which is not only based upon the trust by its own citizens, but the trust of all people who approve of the ethical and humanistic matters of concern of SEALAND.

[back to the top ▲](#)

Definition of Nature Technology

Nature Technology is:

- technology according to Nature for Nature
- the peaceful connection of man, environment and technology
- the use of discoveries and inventions hitherto negated

Nature Technology wants:

- to help re-establish the natural balance
- harmony between man, environment and technology
- independence from destructive, centralist systems and external constraints

Nature Technology can:

- to help heal natural systems with gravitation-field energetic means
- to detoxify and invigorate water as the blood of Earth
- to help to work and rehabilitate the land ecologically and economically
- to solve social problems in an ecological way

Nature Technology offers:

- gravitation-field energetic products and preparations for the renaturalisation and vitalisation of water, soil, animals etc.
- technical equipment for the detoxification and decalcification of water without chemicals
- the technology for an ecological renewal in town and country

[back to the top ▲](#)

The SEALAND Pyramid

SEALAND can best realise its goals if it in pyramidal fashion develops and concentrates energies and makes them vibrate in harmony with Nature. The mental model of a pyramid is most apt to clarify the concerns of SEALAND.

Among the elements of the pyramid are:

The Base (square foundation of the pyramid)

The base is Nature with her laws, the parts of which are people. The base secures the stability of the whole pyramid. It can do this only if all elements of the pyramid observe the natural laws. Any destruction of an element by another or from without means that the foundation of the pyramid loses its power to carry the pyramid. This seals its destruction.

An important natural law of the base requires closed matter, energy and information circuits. They are needed for the pyramid to regenerate constantly and thus stay viable.

Pyramid Side 1 - Production and Products Distribution

The main feature of this side is production and distribution of products corresponding to the laws of their natural base. Active labour under force-free conditions is the source of a dignified way of living for all members of society who - on the basis of equal rights - participate in the work process.

The right and the duty to work are the same for all able-bodied persons.

Work is the most important source for a dignified life in tune with Nature for all people who actively partake in the work process, as well as for those who for health reasons or because of advanced age have to leave the work process.

Pyramid Side 2 - Science and Natural Technology

Science and Natural Technology are based upon the principles of the pyramid base and create the requirements for the development and the stability of all pyramid sides. They are supported by the sensible use of Nature's energies and thus contribute to secure the life of all elements of the base and of all pyramid sides.

Science and Natural Technology oppose the centralist dinosaurs of technology with decentralised solutions according to Nature. With this they create the basis for a real democratic self-determination for all people.

Natural technology is based upon the acting principles of Nature. Thus for example are the destructive active principles of today's energy production replaced by energy production in harmony with Nature. Natural technology is aimed at maintaining health for all biological systems, whereby energetic processes are decisive as an interplay of prophylactics and therapy.

Pyramid Side 3 - Culture and Social Concerns

Violence-free co-operation in a holistic sense of the people both with each other as well as with the environment is the basis of culture and of social systems. This requires equal education for all that is free of any commercial manipulation of requirements and of brutal or mild methods of stupefaction of the people.

It is an important goal to make people understand Nature and their responsibility

towards her.

Also part of culture, education and social concerns are fitness training, health service, care for the elderly, and youth work. Communication between young and old people is an important part of life and enables the transfer of experience between and within the generations.

Pyramid Side 4 - Policy

The policy of SEALAND is in every respect peace policy, for it is based on non-violence within and without; this does not mean, however, that SEALAND is without protection against other states.

Honesty, transparency and the renunciation of bureaucracy are important elements of the policy of SEALAND, which practices an active neutrality.

SEALAND condemns all violence applied to the solution of political issues and in no way participates in inhumane or belligerent activities.

In its policy, SEALAND forgoes political parties and constraints by factions.

The relations among people are regulated by laws in whose drafting SEALAND'S citizens are actively involved.

[back to the top ▲](#)

The Centre of Government

The centre controlling the whole system can be compared to the spatial centre of gravity within the pyramid. The highest density of energy is found at this point, caused by the energy fields radiating from all the pyramid sides.

As the frequency source, the centre has the responsibility to ensure that the pyramid energy radiates harmonically according to the laws of Nature

Thus the SEALAND government qualitatively differs from all other governments, in which party strife, hatred of heterogeneity and of dissenters, concepts of the enemy and fundamentalism lead to the system's self-destruction. This self-destruction is expressed in extremist acts of violence and a development that engenders favourable conditions for fascistic tyrannies.

The members of the SEALAND centre represent all sides of the pyramid and have themselves to act as frequency generators. This means that the criteria for work at the energy centre exclusively lie in spiritual-ethical qualities and in the ability to work with care and effectiveness.

[back to the top ▲](#)

Perspectives and Visions

SEALAND could be the batting of a butterfly's wings that – according to chaos theory – is able to activate forces that will stop the world war against Nature. The holistic activities of SEALAND can be formulated by citing the ideals stated by the German philosopher Herder in 1797:

The tendency of man's nature contains a universe, upon which is written:

No one for himself alone – everyone for all, thus you are worthy to each other and happy!

An never-ending diversity striving towards the unity that lies in everything and advances all.
